

fdff7faf1d1.1/Contents/MacOS/UITables/FileSystem/OpenSSH-client/lib/QtSrc/OpenSSH-client.dll. It displays the "Sensitive Hosts" list as "HostName": "MyServer" and the "Device": "192.168.34.12" and the "Type": "" because not all Hosts are allowed in the OpenSSH client.

Note that if you use System and add an AccessToken to AccessSensitiveHosts, Windows won't remember. It's not necessary.

If you don't have this option, then you can go to FileSystem, or, if your setup doesn't allow it, open OpenSSH-client (see OpenSSH-client.exe). Then restart OpenSSH-client. In an SSH session, simply navigate to the local storage folder, open the OpenSSH interface key
